                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             188                                                                                                                         The present invention describes a method (MI) for screening for an anti-neoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in expression of at least one gene (I) of a signature gene set, where (I) comprises a sequence (S) selected from 8447 sequences (given in ABL61664 to ABL7010), or is at least 95% identical to (S), where a change in expression is indicative of anti-neoplastic activity. (I) has cytostatic activity and can be used in gene therapy. MI can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a result of MI, and the data is sufficient to convey the chemical structure and/or properties of the agent. MI can be used in the treatment of cancer such as colon, breast, stomach, lung, thyroid,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CGTTCAGATGCCTTTCTCCTTTCCCATGGCCCACTTCATCCTCTTTGTCTTTACGGTTTC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes a method (MI) for screening for an anti-neoplastic agent. The method involves exposing cells to a chemical expension by the method involves exposing cells to a change in expression of at least one gene (I) of a signature gene set, where (I) comprises a sequence (S) selected from 847 sequences (given in ABL61664 to ABL70110), or is at least 95% identical to (S), where a change in expression is indicative of anti-neoplastic activity. (I) has cytostatic activity and can be used in gene therapy. MI can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a result of MI, and the data is useful to convey the chemical structure and/or properties of the agent. MI can be used in the treatment of cancer such as colon, breast, stomach, lung, thyroid,

carcinoma, papillary carcinoma and Wilm's tumour.

expression of at least one gene (I) of a signature gene set, where (I) comprises a sequence (S) selected from 8447 sequences (given in ABL61664 to ABL70110). Or is at least 95% identical to (S), where a change in expression is indicative of anti-neoplastic activity. (I) has cytostatic activity and can be used in gene therapy. MI can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a structure and/or properties of the agent. MI can be used in the reatment of cancer such as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney, prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell cancer, infiltrating ductal cancer, infiltrating ductal cancer, infiltrating cancer, infiltrating cancer, infiltrating ductal cancer, infiltrating ductal cancer, infiltrating cancer, infiltrating ductal cancer, infiltrating cancer.

The present invention describes nucleic acids (NA) encoding a chimaric glycosyltransferase. The NAs comprise a catalytic domain of a first glycosyltransferase (GT) and a localisation signal of a second GT, whereby when the NA is expressed in a cell and where the chimeric enzyme is located in an area of the cell where it is able to
                                                                                                                          GATCTGGGCCGCATACCTCACGGGGGGGACACCATCTACCTGGGCCAATTACACCCTCCC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence encodes swine alpha(1,2) fucosyltransferase (FUT1). The specification describes methods relating to Escherichia coli-resistant swine. One of the methods for identifying a swine resistant to E. coli-associated intestinal disorders, comprises determining whether the base at 307 of alpha(1,2) fucosyltransferasel gene (FUT1) is adenine (Sic), in which case the swine are resistant. The reatment of swine having E. coli-associated disease. The methods can also be used in breeding programmes to identify swine with resistance
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CTGCTGGCCCTGGCGCGCGCGCGCGCGGCCTTCATCCACCGCGCCATGCACGCC

                                                                                                                                                                                                                                                                                              resistant to intestinal colonisation by E. coli. The method comprises determining whether a genetic polymorphism associated with resistance to colonisation is present in a swine sample, and then inferring that the swine is resistant if it is homorphism associated with resistance to colonisation is present is the swine sport the polymorphism. The method enables the breading of present sequence encodes swine FOTI. The method enables the breading of swine that are resistant to E. coli-related diseases. This method comprises breeding swine that have a genetic polymorphism in the FUTI gene. Nor particularly, the identification method identifies swine that are resistant to E. coli-related intestinal disorders if, in a sample taken, the only nitrogen base at residue 30? in the FUTI gene is adening the assay can be used for RFLP analysis, and the assay itself is used as a basis for a kit, applied to swine of any age, in detecting polymorphisms associated with E. coli F18 receptors. The polymorphisms are useful in developing drugs to treat swine with E. coli-related diseases. However, a mutated form of the portion with the intestinal receptor for F18. The detection of the column of the intestinal receptor for F18. The detection of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               276

This is the nuclectide sequence of the pig FUTI gene encoding alpha-1-2 fucosyltransferase (see AAY9302). A polymorphism at position 307 of the conding region is associated with susceptibility to FIB Escherichia coli colonization; pigs homozygous for adenine at position 307 are resistant to colonization, while heterozygous canimals and animals homozygous for quantine at position 307 are resistant to colonization. A claimed method for improving weight usceptible to colonization. A claimed method for improving weight resistant to E. coli colonization and feeding these animals high levels of plant-based protein concentrate. A claimed method for preventing FIB E. coli colonization in swine, especially swine that are genetically susceptible to FIB E. coli colonization, involves replacing some or all of the plant-based proteins in the diet with are genetically succeptible to FIB E. coli colonization, involves replacing some or all of the plant-based proteins in the diet with useful for developing drugs to treat swine that have E. coli associated disease. The polymorphism to the that have E. coli associated disease. The polymorphism can be detected using
                                   Improving weight gain in swine using swine genetically resistant Escherichia coli and feeding swine high levels of plant based protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This sequence represents the swine alpha (1,2) fucosyltransferase (FUTI) gene. A FUTI gene in which there is a base other than adenine at position 307, may be used for improving weight gain in swine that are genetically susceptible to FIB Escherichia coii. The weight gain may be activated by feeding a diet of at least 40% animal based proteins. The feeding method is used to control FIB E. coli associated intestinal disease in swine.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                IDENTIFICATION METHOD: DNA sequencing and restriction analysis
OTHER INFORMATION: The encoded product of nucleotide SEO ID NO:
OTHER INFORMATION: 1: is the enzyme, GDP-L-fuccose -D-galactoside 2-alpha-fucosy
OTHER INFORMATION: which has the amin ozid sequence described in SEO. ID NO:1:
OTHER INFORMATION: is responsible for the synthesis of 2'-fucosyllactose.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   MOLECULE TYPE: Cloned cDNA representing the product of a MOLECULE TYPE: human genomic DNA segment DESCRIPTION: GDP-L-fucose- -D-galactoside 2-alpha-fucosyl-transferase
                                                                                                                                                        APPLICANT: Prieto, P., Smith, D., Cummings, R., Kopchick, J., Mukerji, APPLICANT: Moremen, K., Pierce, J.
IITLE OF INVENTION: Transgenic Production of Oligosaccharides and TITLE OF INVENTION: Glycoconjugates
NUMBER OF SEQUENCES: 1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           intire amino acid sequence provided. ```

```
IDENTIFICATION METHOD: DNA sequencing and restriction analysis
OTHER INPORMATION: The encoded product of nucleotide SEQ ID NO:
OTHER INFORMATION: 1: is the enzyme, GDP-L-fucose--D-galactoside 2-alpha-fuc
OTHER INFORMATION: which has the amino acid sequence described in SEQ. ID NO:
OTHER INFORMATION: is responsible for the synthesis of 2'-fucosyllactose.
PUBLICATION INFORMATION:
AUTHORS: V.P. Rajan, et al.

Molecular cloning, sequence, and expression of a human GDP-L-fucose:
-1-galactoside 2-alpha.L-
fucosyltransferase cDNA that can form the H blood group antigen.
